

# Deliverable #1 Template : Software Requirement Specification (SRS)

SE 3A04: Software Design II – Large System Design

**Tutorial Number:** T0x

**Group Number:** Gx

**Group Members:**

- Group Member Name (as listed in Avenue)
- You do not need to use student #s or macid (keep those private).

## IMPORTANT NOTES

- Be sure to include all sections of the template in your document regardless whether you have something to write for each or not
  - If you do not have anything to write in a section, indicate this by the *N/A*, *void*, *none*, etc.
- Uniquely number each of your requirements for easy identification and cross-referencing
- Highlight terms that are defined in Section 1.3 (**Definitions, Acronyms, and Abbreviations**) with **bold**, *italic* or underline
- For Deliverable 1, please highlight, in some fashion, all (you may have more than one) creative and innovative features. Your creative and innovative features will generally be described in Section 2.2 (**Product Functions**), but it will depend on the type of creative or innovative features you are including.

# 1 Introduction

- Provide an overview of the document/SRS.

## 1.1 Purpose

- This Software Requirement Specification has been created to specify the requirements needed to develop a secure communication app (VanklComm) for our organization. This SRS will ensure to cover functional requirements specifying how the app will perform the secure communication, including view-points from stakeholders and common business events and use cases and non-functional requirements outlining specifications of the system.

## 1.2 Scope

- Identify the software product(s) to be produced, and name each (e.g., Host DBMS, Report Generator, etc.)
- Explain what the software product(s) will do (and, if necessary, also state what they will not do).
- Describe the application of the software being specified, including relevant benefits, objectives, and goals.

## 1.3 Definitions, Acronyms, and Abbreviations

- Provide the definitions of all terms, acronyms, and abbreviations required to properly interpret the SRS.
- This should be in alphabetical order.

## 1.4 References

- Provide a complete list of all documents referenced elsewhere in the SRS.
- Identify each document by title, report number (if applicable), date, and publishing organization.
- Specify the sources from which the references can be obtained.
- Order this list in some sensible manner (alphabetical by author, or something else that makes more sense).

## 1.5 Overview

- Describe what the remainder of the document/SRS contains.  
(e.g. "Section 2 discusses...Section 3...")

# 2 Overall Product Description

- This section should describe the general factors that affect the product and its requirements.
- It does not state specific requirements.
- It provides a *background* for those requirements and makes them easier to understand.

## 2.1 Product Perspective

- Put the product into perspective with other related products, i.e., context
- If the product is independent and totally self-contained, it should be stated here
- If the SRS defines a product that is a component of a larger system, then this subsection should relate the requirements of that larger system to the functionality of the software being developed. Identify interfaces between that larger system and the software to be developed.
- A block diagram showing the major components of the larger system, interconnections, and external interfaces can be helpful

## 2.2 Product Functions

- Provide a *summary* of the major functions that the software will perform.
  - **Example:** An SRS for an accounting program may use this part to address customer account maintenance, customer statement, and invoice preparation without mentioning the vast amount of detail that each of those functions requires.
- Functions should be organized in a way that makes the list of functions understandable to the customer or to anyone else reading the document for the first time
- Present the functions in a list format - each item should be one function, with a brief description of it
- Textual or graphical methods can be used to show the different functions and their relationships
  - Such a diagram is not intended to show a design of a product, but simply shows the logical relationships among variables

## 2.3 User Characteristics

- Describe those general characteristics of the intended users of the product including educational level, experience, and technical expertise
- Since there will be many users, you may wish to divide into different user types or personas

## 2.4 Constraints

- Provide a general description of any constraints that will limit the developer's options

## 2.5 Assumptions and Dependencies

- List any assumptions you made in interpreting what the software being developed is aiming to achieve
- List any other assumptions you made that, if it fails to hold, could require you to change the requirements
  - **Example:** An assumption may be that a specific operating system will be available on the hardware designated for the software product. If, in fact, the operating system is not available, the SRS would then have to change accordingly.

## 2.6 Apportioning of Requirements

- Identify requirements that may be delayed until future versions of the system

### 3 Use Case Diagram

- Provide the use case diagram for the system being developed.
- You do not need to provide the textual description of any of the use cases here (these will be specified under "Highlights of Functional Requirements").

### 4 Highlights of Functional Requirements

- Specify all use cases (or other scenarios triggered by other events), organized by Business Event.
- For each Business Event, show the scenario from every Viewpoint. You should have the same set of Viewpoints across all Business Events. If a Viewpoint doesn't participate, write N/A so we know you considered it still. You can choose how to present this - keep in mind it should be easy to follow.
- At the end, combine them all into a Global Scenario.
- Your focus should be on what the system needs to do, not how to do it. Specify it in enough detail that it clearly specifies what needs to be accomplished, but not so detailed that you start programming or making design decisions.
- Keep the length of each use case (Global Scenario) manageable. If it's getting too long, split into sub-cases.
- You are *not* specifying a complete and consistent set of functional requirements here. (i.e. you are providing them in the form of use cases/global scenarios, not a refined list). For the purpose of this project, you do not need to reduce them to a list; the global scenarios format is all you need.
- Red text below is just to highlight where you need to insert a scenario - don't actually write it all in red.

**Main Business Events:** List out all the main business events you are presenting. If you sub-divided into smaller ones, you don't need to include the smaller ones in this list.

**Viewpoints:** List out all the viewpoints you will be considering.

**Interpretation:** Specify any liberties you took in interpreting business events, if necessary.

**BE1.** Business Event Name #1

**VP1.** Viewpoint Name #1

Insert Scenario Here

**VP2.** Viewpoint Name #2

Insert Scenario Here

**Global Scenario:**

Insert Scenario Here

**BE2.** Business Event Name #2

**VP1.** Viewpoint Name #1

Insert Scenario Here

**VP2.** Viewpoint Name #2

Insert Scenario Here

**Global Scenario:**

Insert Scenario Here

## 5 Non-Functional Requirements

- For each non-functional requirement, provide a justification/rationale for it.

**Example:**

SC1. *The device should not explode in a customer's pocket.*

**Rationale:** Other companies have had issues with the batteries they used in their phones randomly exploding [insert citation]. This causes a safety issue, as the phone is often carried in a person's hand or pocket.

- If you need to make a guess because you couldn't really talk to stakeholders, you can say "We imagined stakeholders would want...because..."
- Each requirement should have a unique label/number for it.
- In the list below, if a particular section doesn't apply, just write N/A so we know you considered it.

### 5.1 Look and Feel Requirements

#### 5.1.1 Appearance Requirements

LF-A1.

#### 5.1.2 Style Requirements

LF-S1.

### 5.2 Usability and Humanity Requirements

#### 5.2.1 Ease of Use Requirements

UH-EOU1.

#### 5.2.2 Personalization and Internationalization Requirements

UH-PI1.

#### 5.2.3 Learning Requirements

UH-L1.

#### 5.2.4 Understandability and Politeness Requirements

UH-UP1.

#### 5.2.5 Accessibility Requirements

UH-A1.

### 5.3 Performance Requirements

#### 5.3.1 Speed and Latency Requirements

PR-SL1.

#### 5.3.2 Safety-Critical Requirements

PR-SC1.

### **5.3.3 Precision or Accuracy Requirements**

PR-PA1.

### **5.3.4 Reliability and Availability Requirements**

PR-RA1.

### **5.3.5 Robustness or Fault-Tolerance Requirements**

PR-RFT1.

### **5.3.6 Capacity Requirements**

PR-C1.

### **5.3.7 Scalability or Extensibility Requirements**

PR-SE1.

### **5.3.8 Longevity Requirements**

PR-L1.

## **5.4 Operational and Environmental Requirements**

### **5.4.1 Expected Physical Environment**

OE-EPE1.

### **5.4.2 Requirements for Interfacing with Adjacent Systems**

OE-IA1.

### **5.4.3 Productization Requirements**

OE-P1.

### **5.4.4 Release Requirements**

OE-R1.

## **5.5 Maintainability and Support Requirements**

### **5.5.1 Maintenance Requirements**

MS-M1.

### **5.5.2 Supportability Requirements**

MS-S1.

### **5.5.3 Adaptability Requirements**

MS-A1.

## **5.6 Security Requirements**

### **5.6.1 Access Requirements**

SR-AC1.

### **5.6.2 Integrity Requirements**

SR-INT1.

### **5.6.3 Privacy Requirements**

SR-P1.

### **5.6.4 Audit Requirements**

SR-AU1.

### **5.6.5 Immunity Requirements**

SR-IM1.

## **5.7 Cultural and Political Requirements**

### **5.7.1 Cultural Requirements**

CP-C1.

### **5.7.2 Political Requirements**

CP-P1.

## **5.8 Legal Requirements**

### **5.8.1 Compliance Requirements**

LR-COMP1.

### **5.8.2 Standards Requirements**

LR-STD1.

## **A Division of Labour**

Include a Division of Labour sheet which indicates the contributions of each team member. This sheet must be signed by all team members.
