

Deliverable #2 Template

SE 3A04: Software Design II – Large System Design

Tutorial Number: T0x

Group Number: Gx

Group Members:

- List all Group Member Names (as listed in Avenue)
- You do not need to use student #s or macid (keep those private).

IMPORTANT NOTES

- Please document any non-standard notations that you may have used
 - *Rule of Thumb*: if you feel there is any doubt surrounding the meaning of your notations, document them
- Some diagrams may be difficult to fit into one page
 - Ensure that the text is readable when printed, or when viewed at 100% on a regular laptop-sized screen.
 - If you need to break a diagram onto multiple pages, please adopt a system of doing so and thoroughly explain how it can be reconnected from one page to the next; if you are unsure about this, please ask about it
- Please submit the latest version of Deliverable 1 with Deliverable 2
 - Indicate any changes you made.
- If you do NOT have a Division of Labour sheet, your deliverable will NOT be marked

1 Introduction

This section should provide an brief overview of the entire document.

1.1 Purpose

State the purpose and intended audience for the document.

1.2 System Description

Give a brief description of the system. This could be a paragraph or two to give some context to this document.

1.3 Overview

Describe what the rest of the document contains and explain how the document is organised (e.g. "In Section 2 we discuss...in Section 3...").

2 Analysis Class Diagram

This section should provide an analysis class diagram for your application.

3 Architectural Design

This section should provide an overview of the overall architectural design of your application. Your overall architecture should show the division of the system into subsystems with high cohesion and low coupling.

3.1 System Architecture

- Identify and explain the overall architecture of your system
- Be sure to clearly state the name of the architecture you used (this is the name of the architectural pattern, not the name of your system)
- Provide the reasoning and justification of the choice of architecture
- Provide a structural architecture diagram showing the relationship among the subsystems (if appropriate)
- List any design alternatives you considered, but eliminated (and explain why you eliminated them)

There a 3 primary subsections within the system that utilize their own distinct architecture style but still exist within the overall larger architecture style:

Subsystem	Purpose	Architectural Style
Account Management	Create, Login and Manage Account Information and Functions	Repository
Communication Management	Provides communication functionality between different agents and users.	Repository
KDC Management	Provides encryption and decryption functionalities	Pipe and Filter

The subsystems employ the Repository and the Pipe and Filter architecture styles and the relationship and functionality are further defined in section 3.2.

We also include 4 databases on the model level, an account database, a contacts database, a KDC database and a Chat Log database.

-Talk about MVC Here

We chose the Repository Architecture Style for the Account Management and Communication Management subsystem since it supports easy scalability and utilizes a passive data store meaning the agents are active in controlling the data flow logic. This enables different agents to access different aspects of the system and different parts of data at the same time which will be beneficial for our system. Also having easy scalability through the introduction of new agents is crucial for our use case and easily implemented through this architecture style.

The Pipe and Filter Architecture Style was chosen for the KDC since it provides efficient processing of data with a high throughput and flexibility. Since we are expecting many messages at the same time throughput is a crucial factor to consider and the pipe and filter architecture allows for easy scaling of throughput through concurrency. It also provides simplicity by sectioning different parts of the KDC into filters for encryption and decryption. Finally it also allows for reusability and room to expand by simplify modifying or adding more pipes and filters.

3.2 Subsystems

Provide a list of your subsystems, with a brief description of each. Be sure to document its purpose and relationship to other subsystems.

We have 3 primary subsystems that are contained within the overall system which provide distinct functionalities and which also have their own distinct architectural styles for implementation. Our Three distinct subsystems include: Account Management, Communication Management Service, and KDC Management.

The Account Management subsystem provides users with ability to create and login to their account and is responsible for ensuring that only authorized users account access the system by interfacing with the external apis. It also manages users contacts and interfaces with the communication management service to allow for communication and the authentication management for authentication management. It utilizes the repository architecture style.

The Communication Management Service provides users with the ability to contact other authorized user by sending and receiving messages. It also allows for the sending and receiving of files through file transfer, the reporting of messages and receiving of announcement board posts. It interacts with the authentication management to ensure the authentication of users, the KDC Management for encryption and decryption of messages and the chat log management and adheres to the Repository architecture style.

The KDC Management provides the encryption and decryption functions for the system. It interacts with the communication module and utilizes a pipe and filter architecture style.

4 Class Responsibility Collaboration (CRC) Cards

This section should contain all of your CRC cards.

- Provide a CRC Card for each identified class
- Please use the format outlined in tutorial, i.e.,

Class Name:	
Responsibility:	Collaborators:

A Division of Labour

Include a Division of Labour sheet which indicates the contributions of each team member. This sheet must be signed by all team members.
